Please be aware that these drivers are used at your own risk; Echo Digital Audio Corporation is not responsible for any damage or loss incurred by the use of these drivers.

Release Information

This is the second beta release of the Mac OS X drivers for the Indigo ExpressCard products.

Supported Operating Systems

This software is for Intel MacBook computers running Mac OS X 10.4 and later. PowerPC Macs are not supported, as Apple has not manufactured a Macintosh with a PowerPC processor and an ExpressCard slot.

Changes

- Fixed hardware interrupt sharing
- Changed physical memory handling to support Macs with more than 2.5 GB of RAM
- Adjusted the headphone output level to prevent distortion

Known issues

- While this software should work with Mac OS X 10.4, it has only been tested with Mac OS X 10.5. If you are using Mac OS X 10.4, please let us know your results.
- Sample rates above 48 kHz are currently not supported.
- The driver does not automatically save and restore mixer settings.
- The sample rate cannot be set from the Indigo ExpressCard console. It can be set from your audio software or from Audio MIDI Setup.

Installation

1. Drag and drop the Indigo ExpressCard Console to the Applications folder.
2. Open the Indigo ExpressCard driver installer and follow the on-screen directions.
3. Restart your MacBook
4. Insert your Indigo IOx or DJx into your MacBook.
